

Chaeun (Clara) Kim

(562) 360-0753 | 02clara.kim@gmail.com | Cerritos, CA | github.com/02clarakim | [Portfolio](#)

EDUCATION

University of California, Berkeley

May 2026

B.A. Computer Science, B.A. Cognitive Science

GPA: 3.8/4.0

Relevant Coursework: Operating Systems and System Programming, Introduction to Database Systems, Efficient Algorithms and Intractable Problems, Data Structures, Introduction to Artificial Intelligence, Computer Security

SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, C

Frameworks & Databases: React, Next.js, Node.js, React Native, Flutter, PostgreSQL, Supabase, Redis, Stripe, Git

AI Tools: Claude Code, OpenAI API, LangGraph, LLM evaluation, Langfuse, n8n

EXPERIENCE

Globify | Founding Engineer

Feb 2026 – Present

- Replaced a manual Discord, WhatsApp, and Google Sheets workflow for a 300-creator network with an end-to-end marketplace platform, building a React Native iOS app, Next.js admin console, and Supabase/PostgreSQL backend as sole engineer using Claude Code; now in TestFlight ahead of App Store launch
- Built live chat and push notifications triggered by database events (Supabase Realtime, Postgres triggers, Expo push), so new messages and campaigns reach users without the app polling the server
- Built an escrow-style payment flow with Stripe Connect in which brands fund campaigns up front and creator payouts are released only after the brand and staff approve each deliverable
- Implemented role-based access control for creators, brands, and staff using PostgreSQL row-level security, so each user can only read and change their own data

Honda Research Institute (99P Labs) | AI Engineer Intern

Feb 2026 – May 2026

- Built a multi-agent LLM pipeline (LangGraph, TypeScript, GPT-4o) that researches and ranks innovation strategies for the eVTOL and robotaxi markets; presented results to 99P Labs researchers
- Made prompt changes measurable by building an evaluation system: a 7-factor scoring and ranking step inside the pipeline, plus an A/B testing harness that compares prompt versions using LLM-as-judge scoring
- Kept A/B results trustworthy when LLM calls failed by counting failures against a prompt version instead of skipping them, and logged every scoring decision in Langfuse for review

Naver Z (ZEP Quiz) | Software Engineer Intern

Sep 2025 – Dec 2025

- Automated quiz content generation at a capacity of ~900 questions/day (10 questions for each of 15 trending keywords, every 4 hours) by building an n8n pipeline combining SerpApi trend data with GPT-4o
- Took content from generation to publication without manual steps by adding an evaluation stage that filters out weak quizzes and auto-publishes passing ones as YouTube Shorts; designed the Shorts video layout

Fasoo | Software Developer Intern

Jun 2025 – Aug 2025

- Cut UI integration time 30% by building a cross-platform Flutter component library from Figma designs

PROJECTS

MatchThread: Live Football Feed with Verified Goal Clips

Aug 2026 – Sep 2026

Next.js, TypeScript, PostgreSQL, Redis, WebSockets, FetchLayer REST API, OpenAI API

- Built a background worker that collects Reddit goal clips only during match windows computed from the ESPN schedule, so it makes no API calls on days without matches
- Recovered missed clips with a daily catch-up job for matches up to 90 days old that skips matches already covered and retires a match after 5 failed attempts
- Prevented false goal posts by checking Reddit posts against ESPN data (scorer, minute, score) before publishing, then pushed verified clips, match events, and LLM-generated commentary to a live feed over WebSockets

LEADERSHIP

Idea Factory (Consulting Club), UC Berkeley

Feb 2022 – May 2026

President (2024–25), Internal Vice President (Fall 2023), Project Manager (2022–23), Advisor (Spring 2024, 2025–26)

- Led US-expansion market research for Korean consumer brands, turning 1,000+ survey responses on local preferences (cafe menus, fashion, makeup, skincare) into actionable market analyses
- Secured 2–3 client contracts per semester, delivered 8+ projects, and recruited 15–20 members annually while overseeing project managers and the board
